

I urge to reject NAB's petition 04-160. It is an effort by the National Association of Broadcasters to stifle competition and control the air waves. I use satellite radio when traveling to get the weather and traffic reports as I drive thru unfamiliar towns. I get up-to-date traffic information without having to wait 15 to 20 minutes listening to other programming, thus getting the information in a timely manner. This makes my commute or travels much easier.
